PROFESSIONAL SUMMARY

Senior Ruby on Rails developer with 13+ years of production experience across fintech (crypto exchange), SaaS, and high-growth startups. Deep expertise in PostgreSQL, background job processing, infrastructure automation, and observability. Proven ability to architect solutions under pressure — including critical zero-downtime migrations, custom blockchain integrations, and performance optimization at scale. Self-driven and effective in fully remote environments.

KEY ACHIEVEMENTS

- ▶ Migrated a live production system (Dokku → Kamal) including a 1 TB PostgreSQL database to a new hosting provider in ~3 hours — minimal revenue loss, near-zero customer complaints.
- ▶ **< 200 ms.** Eliminated search performance bottlenecks using a PostgreSQL UNLOGGED TABLE (CQRS pattern) — reduced query time from unpredictable spikes to a stable
- ▶ Designed a proprietary order-book matching algorithm for instant crypto exchange — integrated into both exchange and P2P modules for a seamless cross-product experience.
- ▶ Added Tron and Solana blockchain networks for deposits and withdrawals, running on self-hosted nodes with automatic fallback to getblock.io for high availability.
- ▶ Built a video rendering microservice on AWS with autoscaling for maxadesigns.com, deployed independently as a standalone service.

TECHNICAL SKILLS

Language	Ruby (2012 – present)
Framework	Ruby on Rails — versions 3.x through 7.x
Databases	PostgreSQL (UNLOGGED tables, EXPLAIN ANALYZE, indexing, partitioning), Redis
Queue / BG	Sidekiq, RabbitMQ
Blockchain	Tron, Solana — node deployment, deposit/withdrawal logic, fallback RPC
DevOps	Docker, Kamal, Capistrano, AWS (EC2, S3, RDS, Autoscaling), Nginx, Linux
Monitoring	Prometheus (Rails, PostgreSQL, Redis, Sidekiq, Nginx + business metrics)
Tooling	Jira, Confluence, Git, CI/CD

WORK EXPERIENCE

Senior Ruby on Rails Developer · Confidential (NDA)

Jun 2023 – Apr 2026

- ▶ Scaled a single-server application to a multi-server topology (web / database / background workers) in response to rapid user growth.
- ▶ Led a Dokku → Kamal migration including a 1 TB PostgreSQL database and Redis to a new hosting provider — total downtime ~3 hours, negligible business impact.

- ▶ Designed a CQRS-based UNLOGGED TABLE search layer in PostgreSQL: normalized data kept intact, denormalized copy updated via background jobs — search latency reduced to a consistent sub-200 ms.
- ▶ Implemented a Prometheus monitoring stack covering infrastructure (Rails, PostgreSQL, Redis, Sidekiq, Nginx) and custom business KPIs — enabling proactive performance tuning and fast incident resolution.

Ruby on Rails Developer · **Crypto Exchange (Confidential, NDA)**

2021 – 2023

- ▶ Integrated Tron and Solana blockchain networks for deposit and withdrawal flows, running on self-hosted full nodes with automatic RPC fallback to getblock.io for fault tolerance.
- ▶ Developed an instant exchange feature based on a custom order-book matching algorithm — designed the algorithm independently.
- ▶ Built seamless P2P ↔ Exchange integration allowing P2P users to access exchange functionality without friction.

Ruby on Rails Developer · **Fohlio**

2018 – 2021

- ▶ Contributed to new feature development for a US-based SaaS product (interior design & procurement platform).
- ▶ Collaborated closely with business analysts to translate product requirements into technical solutions.
- ▶ Used Jira and Confluence for project management; deployed infrastructure on AWS.

Ruby on Rails Developer · **maxadesigns.com**

2023

- ▶ Architected and deployed a standalone video rendering microservice on AWS with autoscaling — handles burst rendering workloads independently from the main application.

EDUCATION

Bachelor's Degree · University (details available on request) · 2006

LANGUAGES

Russian	Native
English	B1–B2 (professional reading/writing, comfortable in async remote environments)
